EDUCATION

KLE M MUNAAVALLI SCHOOL — Gokak, India
SSLC CBSE, **CGPA: 9.6** — 2007-2017

RAJA LAKAMANGOUDA P.U COLLEGE OF SCIENCE — Belagavi, India
PUC SCIENCE, **PERCENTAGE: 61.83%** — 2017-2019

SDM COLLEGE OF ENGINEERING AND TECHNOLOGY — Dharwad, India
Bachelor of Engineering, Computer Science and Engineering, **8th Semester CGPA: 8.4** — 2022-2026

SKILLS

Technical Skills: Express, Node, TypeScript, Java, Spring Boot, PostgreSQL, ReactJS, Docker, Git

ACADEMIC PROJECT

LapKart — E-Commerce Platform for Laptops

- **Full-Stack Web Development:** Built **LapKart**, a full-stack laptop e-commerce platform using **Spring Boot**, **React**, and **MySQL**, featuring stateless JWT authentication, role-based access (Customer/Admin), and Zustand state management.
- **Payment Gateway Integration:** Integrated **Razorpay** to support UPI, Cards, and NetBanking payments, implementing secure backend HMAC-SHA256 signature verification to prevent transaction tampering.
- **Smart Cart & Coupon Engine:** Developed a guest shopping cart with browser local storage that automatically syncs and merges into the user's database cart upon login, along with a dynamic discount promo code engine.
- **Order Lifecycle & Inventory Control:** Automated real-time inventory management that deducts product stock upon purchase and automatically restocks items whenever an order is cancelled by the customer or admin.
- **Post-Purchase & Customer Services:** Created key fulfillment features including live courier tracking (AWB), GST-compliant printable tax invoices, a multi-address book for rapid checkout, and a verified product review/rating system.

INTERNSHIP

ECOMETA INTEGRATED SOLUTIONS PVT LTD — Huballi, India(On-site)
Fullstack Developer Intern – ONDC Logistics Platform — Jan 2026 – July 2026

- Contributed to the development and deployment of the Aarambh platform ecosystem within the ONDC network, building and scaling production-grade web applications using **Node.js and Angular.**
- **Developed a dynamic weather-based surge pricing engine** by integrating a weather API with a custom hexagonal GPS grid algorithm, calculating real-time rain surges precisely across pickup and drop-off coordinates.
- Engineered robust backend microservices and RESTful APIs using **Node.js**, and **PostgreSQL**, supporting scalable features across Aarambh Track and Aarambh Fleet (Logistics).
- Managed and deployed containerized application infrastructure on **AWS** using Docker and Kubernetes clusters, ensuring high availability, system reliability, and seamless production monitoring on Linux servers.
- **Engineered a real-time Live Order Map** leveraging Redis for lightning-fast data retrieval, implementing chunked data streaming and payload minification to process massive order volumes (50k+ items) without bottlenecking the Flask server.
